

## Applied Chemistry

1. Applied chemistry deals with
  - A) Practical use of chemical principles
  - B) Only theoretical chemistry
  - C) Only organic chemistry
  - D) Only inorganic chemistry

Answer: A

2. The branch of chemistry used in industries is called
  - A) Applied chemistry
  - B) Physical chemistry
  - C) Nuclear chemistry
  - D) Astrochemistry

Answer: A

3. Fertilizers are used to
  - A) Increase soil fertility
  - B) Decrease crop yield
  - C) Remove soil nutrients
  - D) Stop plant growth

Answer: A

4. Example of nitrogen fertilizer
  - A) Urea
  - B) Sodium chloride
  - C) Calcium oxide
  - D) Carbon dioxide

Answer: A

5. Chemical formula of urea
  - A)  $\text{CO}(\text{NH}_2)_2$
  - B)  $\text{NH}_3$
  - C)  $\text{NaCl}$
  - D)  $\text{CO}_2$

Answer: A

6. Phosphatic fertilizers provide
  - A) Nitrogen

B) Phosphorus

C) Potassium

D) Calcium

Answer: B

7. Potassic fertilizers provide

A) Potassium

B) Nitrogen

C) Oxygen

D) Hydrogen

Answer: A

8. Ammonium sulphate is a

A) Nitrogen fertilizer

B) Potassium fertilizer

C) Phosphorus fertilizer

D) Calcium fertilizer

Answer: A

9. Superphosphate is a

A) Phosphatic fertilizer

B) Nitrogen fertilizer

C) Potassium fertilizer

D) Carbon fertilizer

Answer: A

10. NPK fertilizers contain

A) Nitrogen, phosphorus and potassium

B) Sodium, potassium and chlorine

C) Nitrogen, oxygen and hydrogen

D) Calcium, sodium and potassium

Answer: A

11. Pesticides are chemicals used to

A) Kill pests

B) Increase pests

C) Stop crop growth

D) Remove soil

Answer: A

12. Insecticides kill

A) Insects

B) Weeds

C) Fungi

D) Bacteria

Answer: A

13. Herbicides kill

A) Weeds

B) Insects

C) Bacteria

D) Viruses

Answer: A

14. Fungicides kill

A) Fungi

B) Bacteria

C) Insects

D) Weeds

Answer: A

15. Example of insecticide

A) DDT

B) NaCl

C) HCl

D) CO<sub>2</sub>

Answer: A

16. DDT stands for

A) Dichloro diphenyl trichloroethane

B) Double diphenyl trioxide

C) Dichloro diphenyl trioxide

D) Double diphenyl trichloride

Answer: A

17. Excess use of pesticides causes

- A) Environmental pollution
- B) Soil fertility increase
- C) Pure air
- D) Pure water

Answer: A

18. Drugs are used to

- A) Cure diseases
- B) Cause diseases
- C) Stop digestion
- D) Destroy food

Answer: A

19. Medicines are prepared using

- A) Chemistry
- B) Physics
- C) Biology
- D) Astronomy

Answer: A

20. Antibiotics kill

- A) Bacteria
- B) Viruses
- C) Fungi
- D) Plants

Answer: A

21. Example of antibiotic

- A) Penicillin
- B) Urea
- C) Sodium chloride
- D) Methane

Answer: A

22. Antiseptics are applied on

- A) Living tissues

B) Metals

C) Plastics

D) Rocks

Answer: A

23. Disinfectants are used on

A) Non-living surfaces

B) Living tissues

C) Plants

D) Animals

Answer: A

24. Example of antiseptic

A) Dettol

B) NaCl

C) CO<sub>2</sub>

D) NH<sub>3</sub>

Answer: A

25. Example of disinfectant

A) Phenol

B) Methane

C) Hydrogen

D) Oxygen

Answer: A

26. Food preservatives prevent

A) Spoilage of food

B) Food growth

C) Water loss

D) Oxygen formation

Answer: A

27. Example of food preservative

A) Sodium benzoate

B) Sodium chloride

C) Calcium carbonate

D) Hydrogen peroxide

Answer: A

28. Refrigeration preserves food by

A) Lowering temperature

B) Increasing temperature

C) Adding salt

D) Adding sugar

Answer: A

29. Plastics are

A) Polymers

B) Metals

C) Salts

D) Acids

Answer: A

30. Polymers are formed by

A) Polymerization

B) Neutralization

C) Oxidation

D) Reduction

Answer: A

31. Example of plastic

A) Polyethylene

B) Sodium chloride

C) Carbon dioxide

D) Methane

Answer: A

32. PVC stands for

A) Polyvinyl chloride

B) Polyvinyl carbonate

C) Polyvinyl carbon

D) Polyvinyl calcium

Answer: A

33. Nylon is used in

- A) Fabrics
- B) Metals
- C) Rocks
- D) Soil

Answer: A

34. Synthetic fibres include

- A) Nylon
- B) Rayon
- C) Polyester
- D) All of these

Answer: D

35. Soap is produced by

- A) Saponification
- B) Polymerization
- C) Neutralization
- D) Oxidation

Answer: A

36. Soap is made from

- A) Fats and oils
- B) Metals
- C) Acids
- D) Salts

Answer: A

37. Detergents are used for

- A) Cleaning
- B) Cooking
- C) Fertilizing
- D) Painting

Answer: A

38. Detergents work well in

- A) Hard water

- B) Soft water
- C) Distilled water
- D) Rainwater

Answer: A

39. Cement is used in

- A) Construction
- B) Medicine
- C) Food
- D) Fertilizer

Answer: A

40. Cement contains

- A) Calcium compounds
- B) Sodium compounds
- C) Hydrogen compounds
- D) Nitrogen compounds

Answer: A

41. Glass is made from

- A) Silica
- B) Sodium chloride
- C) Carbon
- D) Iron

Answer: A

42. Main raw material of glass

- A) Sand
- B) Salt
- C) Sugar
- D) Water

Answer: A

43. Ceramics are made from

- A) Clay
- B) Metal
- C) Plastic

D) Salt

Answer: A

44. Paints protect

A) Surfaces

B) Water

C) Air

D) Soil

Answer: A

45. Paints contain

A) Pigments

B) Water only

C) Salt only

D) Metal only

Answer: A

46. Dyes are used to

A) Colour fabrics

B) Cook food

C) Fertilize soil

D) Produce metals

Answer: A

47. Natural dyes come from

A) Plants and animals

B) Metals

C) Rocks

D) Water

Answer: A

48. Synthetic dyes are produced by

A) Chemical processes

B) Natural growth

C) Plants

D) Animals

Answer: A

49. Petrochemicals are obtained from

- A) Petroleum
- B) Water
- C) Salt
- D) Soil

Answer: A

50. Petroleum products include

- A) Petrol
- B) Diesel
- C) Kerosene
- D) All of these

Answer: D

51. LPG stands for

- A) Liquefied Petroleum Gas
- B) Liquid Petrol Gas
- C) Low Pressure Gas
- D) Liquid Power Gas

Answer: A

52. CNG stands for

- A) Compressed Natural Gas
- B) Chemical Natural Gas
- C) Carbon Natural Gas
- D) Compressed Nitrogen Gas

Answer: A

53. Fertilizers increase

- A) Crop yield
- B) Soil erosion
- C) Water pollution
- D) Air pollution

Answer: A

54. Excess fertilizers cause

- A) Water pollution

## Applied Chemistry

- B) Clean water
- C) Clean soil
- D) Pure air

Answer: A

55. Biodegradable substances

- A) Decompose naturally
- B) Do not decompose
- C) Remain forever
- D) Are metals

Answer: A

56. Non-biodegradable substances

- A) Do not decompose easily
- B) Decompose quickly
- C) Are gases
- D) Are liquids

Answer: A

57. Plastic pollution affects

- A) Environment
- B) Only water
- C) Only soil
- D) Only air

Answer: A

58. Recycling helps to

- A) Reduce waste
- B) Increase waste
- C) Destroy materials
- D) Stop production

Answer: A

59. The process of converting waste into new products

- A) Recycling
- B) Oxidation
- C) Neutralization

D) Combustion

Answer: A

60. Biogas mainly contains

A) Methane

B) Oxygen

C) Hydrogen

D) Nitrogen

Answer: A

61. Biogas is produced by

A) Anaerobic decomposition

B) Combustion

C) Oxidation

D) Reduction

Answer: A

62. Green chemistry focuses on

A) Environment-friendly processes

B) Pollution

C) Waste production

D) Toxic chemicals

Answer: A

63. Catalysts increase

A) Reaction rate

B) Reaction temperature

C) Reaction mass

D) Reaction colour

Answer: A

64. Catalysts remain

A) Unchanged after reaction

B) Destroyed

C) Converted

D) Burned

Answer: A

65. Example of catalyst

- A) Platinum
- B) Sodium chloride
- C) Water
- D) Sand

Answer: A

66. Chemical industries produce

- A) Medicines
- B) Fertilizers
- C) Plastics
- D) All of these

Answer: D

67. Applied chemistry helps in

- A) Agriculture
- B) Medicine
- C) Industry
- D) All of these

Answer: D

68. Water purification uses

- A) Chemicals
- B) Metals
- C) Plastics
- D) Rocks

Answer: A

69. Chlorination is used for

- A) Water disinfection
- B) Fertilizing
- C) Cooking
- D) Heating

Answer: A

70. Bleaching powder is used for

- A) Disinfection

B) Fertilizing

C) Cooking

D) Painting

Answer: A

71. Chemical preservatives extend

A) Shelf life of food

B) Food colour

C) Food smell

D) Food weight

Answer: A

72. Artificial sweeteners are

A) Sugar substitutes

B) Salts

C) Metals

D) Gases

Answer: A

73. Example of artificial sweetener

A) Saccharin

B) Sodium chloride

C) Methane

D) Hydrogen

Answer: A

74. Cosmetics are prepared using

A) Chemical compounds

B) Metals only

C) Water only

D) Gas only

Answer: A

75. Perfumes contain

A) Fragrant chemicals

B) Metals

C) Salts

D) Acids

Answer: A

76. Industrial chemistry deals with

A) Large-scale production

B) Small reactions

C) Natural growth

D) Astronomy

Answer: A

77. Alloys are mixtures of

A) Metals

B) Salts

C) Gases

D) Liquids

Answer: A

78. Example of alloy

A) Brass

B) Salt

C) Sugar

D) Water

Answer: A

79. Brass contains

A) Copper and zinc

B) Copper and iron

C) Iron and carbon

D) Aluminium and copper

Answer: A

80. Stainless steel contains

A) Iron, chromium and nickel

B) Copper and zinc

C) Aluminium and copper

D) Iron and carbon only

Answer: A

81. Electroplating is used to

- A) Coat metal surface
- B) Remove metals
- C) Destroy metals
- D) Break metals

Answer: A

82. Electroplating protects metal from

- A) Corrosion
- B) Heating
- C) Cooling
- D) Freezing

Answer: A

83. Rusting occurs in

- A) Iron
- B) Copper
- C) Gold
- D) Silver

Answer: A

84. Rusting requires

- A) Oxygen and water
- B) Nitrogen only
- C) Hydrogen only
- D) Carbon dioxide only

Answer: A

85. Galvanization protects iron by coating with

- A) Zinc
- B) Copper
- C) Aluminium
- D) Silver

Answer: A

86. Chemistry helps improve

- A) Quality of life

## Applied Chemistry

B) Pollution

C) Waste

D) Diseases

Answer: A

87. Applied chemistry connects chemistry with

A) Real life applications

B) Only theory

C) Only experiments

D) Only labs

Answer: A

88. Chemical technology improves

A) Industrial production

B) Natural growth

C) Weather

D) Soil colour

Answer: A

89. Plastics are widely used because they are

A) Light and durable

B) Heavy and weak

C) Very costly

D) Rare

Answer: A

90. Synthetic fibres are

A) Man-made fibres

B) Natural fibres

C) Metals

D) Salts

Answer: A

91. Rayon is made from

A) Cellulose

B) Iron

C) Copper

D) Nitrogen

Answer: A

92. Polyester is used for

A) Clothes

B) Food

C) Soil

D) Water

Answer: A

93. Biogas plants convert

A) Organic waste to fuel

B) Water to fuel

C) Metals to fuel

D) Salt to fuel

Answer: A

94. Green chemistry reduces

A) Pollution

B) Oxygen

C) Water

D) Plants

Answer: A

95. Sustainable chemistry focuses on

A) Environmental safety

B) Pollution

C) Waste increase

D) Resource destruction

Answer: A

96. Industrial gases include

A) Oxygen

B) Nitrogen

C) Hydrogen

D) All of these

Answer: D

## Applied Chemistry

97. Oxygen is used in

- A) Hospitals
- B) Welding
- C) Industry
- D) All of these

Answer: D

98. Hydrogen is used in

- A) Fuel
- B) Fertilizer production
- C) Industry
- D) All of these

Answer: D

99. Nitrogen is used in

- A) Fertilizer production
- B) Food preservation
- C) Industry
- D) All of these

Answer: D

100. Applied chemistry plays important role in

- A) Agriculture
- B) Medicine
- C) Industry
- D) All of these

Answer: D
